A. Title: The human decorin gene: intron-exon organization, discovery of two alternating A. Reference number: A45015; MUID:93162642; PMID:8432526
A. Status: not compared with conceptual translation
A. Molecule type: DNA
A. Residues: 28-70 CAD2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rikrusius, T.; Ruoslahti, E.

A.Reference number: A23663; MUID:91056119; PMID:2243109
A.Roontents: annotation; keratan sulfate attachment
C:Comment: Reratan sulfate can be covalently attached to N-acetylglucosamine at the aspa C:Superfamily: fibromodulin; leucine-rich alpha-2-glycoprotein repeat homology
C:Keywords: cartilage; chondroitin sulfate proteoglycan; collagen binding; connective tip: F:1-18/Domain: signal sequence #status predicted SIG>
F:19-375/Product: fibromodulin #status experimental <AMAT>
F:38,42,45,47,50,53,62,64/Binding site: sulfate (Tyr) (covalent) #status predicted
F:126,165,200,290/Binding site: carbohydrate (Asn) (covalent) #status experimental
        fibromodulin precursor - bovine

N.Alternate names: 59K collagen-binding matrix protein

C;Species: Bos primigenius taurus (cattle)

O'Species: Mus musculus (house mouse)
C'Species: Was musculus (14130)
R'Ujita, M.; Shinomura, T.; Kimata, K.
Gene 158, 237-240, 1995
A'Title: Molecular cloning of the mouse osteoglycin-encoding gene.
A; Reference number: J04130
A; Molecular type: mRNA
A; Residues: 1-298 «UII»
A; Cross-references: DDBJ:D1951; NID:9971273; PIDN:BAA06721.1; PID:g1060928
C; Comment: This protein is a glycoprotein, belonging to the leucine-rich family. It is
C; Superfamily: osteoinductive factor precursor; leucine-rich alpha-2-glycoprotein rep
C; Reywords: chondroitin sulfate proteoglycan; glycoprotein
F; 1-19/Pomain: signal sequence #status predicted <AMI>F; 20-254/Region: leucine-rich
F; 144-167/Domain: leucine-rich alpha-2-glycoprotein repeat homology <LRR>F; 101/Binding site: chondroitin sulfate (Ser) (covalent) #status predicted
F; 258/Binding site: carbohydrate (Asn) (covalent) #status predicted
